

Support for children with learning difficulties

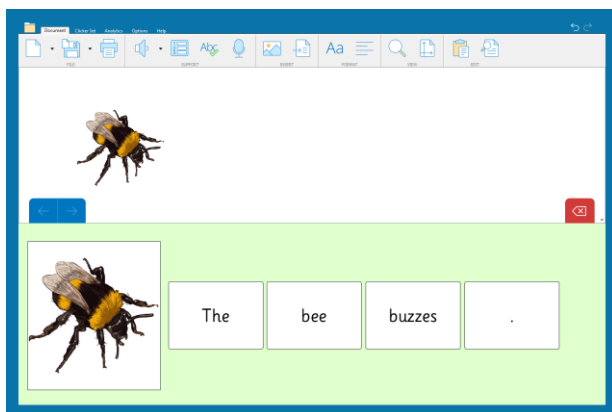

Clicker is the perfect tool to use with students with learning difficulties.

Clicker's multisensory approach of using words, pictures and sounds keeps learners interested and motivated, and gives them the tools they need to achieve success. Clicker enables you to present students with activities that are broken down into small steps, and to revisit learning objectives using a variety of activities.

In this guide we provide just a few specific examples to show how Clicker can be used to support your learners.

"The boy I work with really struggles to work independently but doesn't like to feel that he is being treated differently to his classmates. With Clicker, I can tailor the activities the class is doing to his needs so that as far as he's concerned, he is doing exactly the same work as his peers and is able to achieve success."

Chloé Khan, 1-1 Learning Support Practitioner, Highfields Primary School

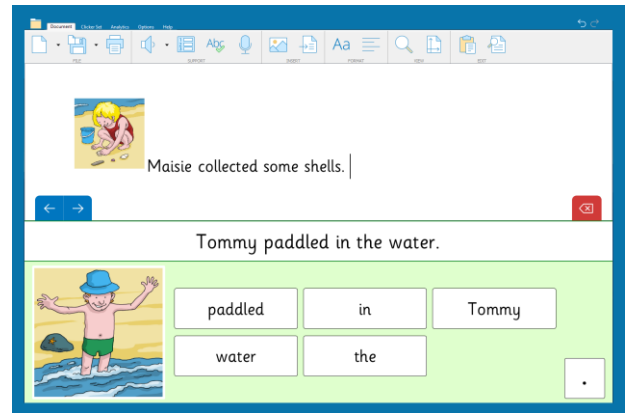

Reinforce left-to-right writing with Sentence Sets

Like other Sentence Sets, 'guided order' sets contain all the words required to build a sentence. However, children are only able to select those words in the correct order. This enables learners at the early stages of writing to compose sentences successfully and helps to build their understanding of what a sentence is, left-to-right directionality and the importance of word order and correct punctuation.

Use models to help students put sentences together correctly

Some children need the support of a model sentence as they begin to write. This helps to build their confidence as they work towards writing their own sentences. With the Sentence Set wizard it's easy to make sentence building activities with the appropriate amount of support.

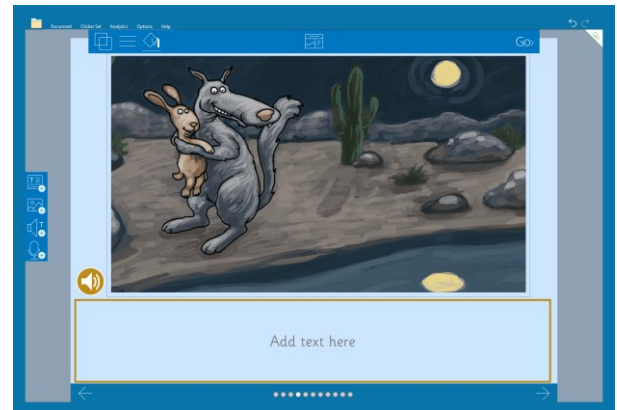

Provide tailored reading support with Clicker Books

Clicker talking books give students reading support at a number of different levels. You can create high-interest books at just the right reading level for your students as well as download ready-made books from LearningGrids.com.

Get students making their own books, too!

Clicker removes the writing block that hinders the development of many children with dyslexia by providing point-and-click access to whole words and phrases that are relevant to the current writing task. Students can listen to each word before using it, and when they complete their sentence it is automatically read back to them.
